Individual Design Creation

The easy way to your design. We transfer your individual design ideas onto a fabric quality of your choice. We will fulfill your wishes promptly and at competitive prices. Our design team will be at your assistance throughout the entire course of your project.

## Digital Printing Technology

State of the art printing technology enables brilliant colours, sharp contours and perfect contrasts. Special colourants are firmly bonded with the fabric fibres at a temperature of 200°C. The typical functions of the fabric such as flame-resistance, washability, light-fastness and wear-resistance remain unchanged.

## Select your desired design from our DESIGN GALLERY

On our website, we offer an extensive array of design suggestions for you to choose from. Upon request, we will create a layout according to your vision. A fabric or colour sample, or even a colour shade in Pantone or RAL suffice us as a guideline. If you should supply us with your own image data, we require a resolution of at least 150 dpi in its original size.

## The DELIUS online colouring programme

This unique colouring programme enables you to quickly and easily recolour the existing designs of DELIUS into your desired colour scheme. By using the colours of RAL D2 Design, you are given a binding colour reference, regardless to colour variations of screen and printer. The design you created can be printed upon completion or sent directly to us.

## Choose the appropriate fabric

We offer seven different base cloths, all of which are flame-resistant. Surely, you shall find the ideal fabric that meets your needs.

## We create your proof

We will send you a fascimile proof for printing release, made according to your specifications. If needed for a mock-up room, we will carry out even the smallest of quantities in a quick and uncomplicated manner.

### Individual Production

The possibilities and flexibility offered by Active Design Printing are endless. We will produce the textiles that best suit your project – economically & efficiently.
