# Dimout Furnishing Fabrics

Dimout at its finest

We offer Dimouts in limitless design and variety. In addition to the attractive plains available in 38 standard colours and from stock, DELIUS is able to realise every desired colour. To achieve a harmonious overall impression, it is recommended to match the front and back side of the fabric in most cases.

## Dimout at its finest

The softly flowing double satin with a black weft elegantly exceeds the normal furnishing fabrics. Dimout reduces the usual light transmission from 40% to only 1%. In other words: During the day this wonderful fabric quality produces a pleasant diffuse light. At night it carefully absorbs every ray of light.

Printing in dark colours on the back of the fabric can increase the darkening effect. When using the Dimout doubled, the fabric effectively even becomes a 100% “Blackout”.

## Weaving effects

Looks like real: any kind of weave and even jacquard-structures are realized deceptively realistic – the eye can hardly see a difference.

## Print Designs

Suitable for every room concept: whether it be a plain fabric, graphic or floral designs – DELIUS fabrics offer endless opportunities. We would gladly put together an offer for you. In case of any further questions please contact your sales representative.

### Double-Faced-Design

Versatile possibilities: the double-sided printing of attractive designs even double the overall attractiveness of our Dimout. There is no question whether it is the front or back side. Both options are equally desirable.

### Surface effects

Tangible and impressive: embossing in stripe or floral design places emphasis and highlights the value of our attractive designs.

Prints, surface-effects, Double-Faced-Design and woven structures produce amazing results. We are pleased to develop and provide solutions, even for small quantities for individual special purposes.

### Dimout furnishing fabrics beautifully decorate and darken hotel rooms as well as conference rooms.

- high darkening effect
- inherently flame retardant according to DIN 4102 / B1
- elegant, softly flowing fall
- pleasant feel
