

Dimout & Blackout

Darkening in perfection

DELIUS
WORLD OF TEXTILES SINCE 1722

DELIUS offers a comprehensive range of dimout and blackout fabrics. For your hotel rooms or your meeting rooms you can choose amongst modern structures, ambitious designs, puristic surfaces and a large number of colours.

DIMOUT

The softly flowing double satin with a black weft elegantly exceeds the normal furnishing fabric. Dimout reduces the usual light transmission from 40% to only 1%. In other words: During the day this wonderful fabric quality produces a pleasant diffuse light. At night it carefully absorbs every ray of light.

*Transmission normal
furnishing fabric*

Double-Face-Design

The double-sided printing of interesting designs doubles the overall attractiveness of our Dimout. A colour matching printed backside not only looks good, it also increases the darkening effect if printed in dark colours.

Surface effects

Dimout is a versatile fabric. Prints, surface-effects, Double-Face-Design and woven structures produce amazing results.

We are pleased to develop and provide solutions, even for small quantities for individual special purposes.

DELIBLACK Blackouts

Blackouts have a darkening effect of 100%. These fabrics do not allow any light rays to get through. The soft acrylic coating on the back ensures this. The coating of the Delius Blackouts is particularly soft so that the fabric keeps its elegant drape. All DELIBLACK qualities are free of DecaBDE (Decabromdiphenylether).

DELIBLACK - Blackout

- 100% darkening factor
- DecaBDE free
- resistant to dirt
